how does architectural form relate to a cyclist activities?

expectant traverse()

epigenetic fields

is performance a function of orientation and architecture?

network compression

node.Alive = Sum(Local Alive) / Num(Neigh)

If bool.Highrise = "Should Then node.TypeNeighbors = "Public"
End If

dynamic connections

a particular framework for the design domain

spiral agglomerations?

boolNodes = node.Distance(3)

If evalbol = residential AND hoodConnections< 10x10 Then Call RebuildHere(node)
End If

a city is an expression of the relationship both the identities and relational potentials of a place

combinatorial clusters

spiral agglomerations

atomize program to actions and events

epigenetic field

what form achieves maximal value at this node?

relational networks

network connectivity patterns

If node.Active = True AND node.Built = False Then node.Potential = 1
End If

If residents < 10x10 Then hoodConnections = True
End If

what kind of things matter when they are close?

what district things influence my activities?

If node.Potential > districtActivity node.Build = True

how is a homelessness storm different from a flood map?

what drives urban differentiation?

If nodetype = residential Then Call RebuildHere(networknode)
End If

euclib nets

If districtActivity > nodeActivity Then nodes = boolNode.Direction
End If
